

## ANTARTIK SYSTEM®

*innovative window wrapping  
system that **allows the window  
to move closer to the warm side  
of the opening and reduce heat loss.***

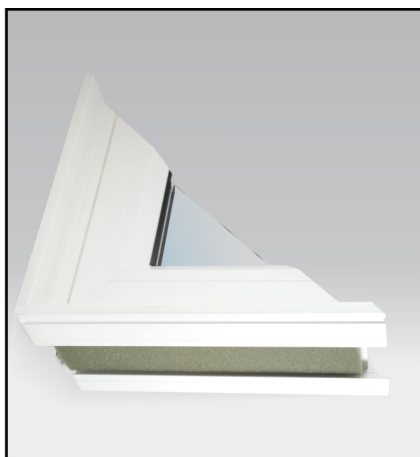

## FEATURES

- Matches new construction windows that are installed flush to the inside
- The Antartik system® is designed to move the thermal glass to the warm side of your wall
- Sets the window frame back 1.5"
- Works with any of the existing Vinylbilt products
- Insulation cavity

## BENEFITS

- No need to build out the window frame to line up inside
- Reduces condensation build-up on the thermal glass
- Designed to cover the existing caulking line
- Can be installed as a system or with existing brickmoulds and jamb extensions
- Provides room for expandable foam or expandable sponge

*Antartik system allows the insulation cavity to be filled in.*
